Flexible Slate Veneer
SlateFlex

A unique new surface innovation for Canadian architects, designers, cabinet and furniture manufacturers and more!

Real slate is now available in lightweight, flexible veneer sheets, their use limited only by the imagination. Put slate where it was never before possible.

- 12 distinctive slate colours and sandstone
- suitable for both interior, exterior and wet applications
- use on backsplash, cabinetry, columns, furniture, lighting, signage, feature walls
- can be applied to standard building surfaces with common adhesives
- innovative, self-adhesive peel and stick feature for the do-it-yourselfer

The Beauty of Natural Slate

Revolutionary slate veneer is made from splitable slate slabs. The rough split texture is a raw stone surface covering a wide range of the colour pallet. Both natural and quartzite slates are available.

The **SlateFlex** veneer product is not only very flexible (approx. 2mm thick) it is also lightweight (approx. 1/2 lb. per sq. ft.) and can be processed in a woodworking shop with standard tools and adhesives. Standard sheet size is 2' x 4' (610 x 1220mm). Other sizes available on special order.

SlateFlex can be cut with tin snips, table saw with carbide or laminate blade, metal shear or wet saw. Cutting curves is best done using long nosed tin snips.

Different backings are available: standard fiberglass polyester, fleece and self adhesive.

The rough stone surface can be treated against contamination with standard stone sealers. Enhancers may also be used to bring out the natural beauty of the slate.

Users should take note that **SlateFlex** is a natural stone product. Within a colour family there will be variations of texture, colour and pattern.

Cost Savings

When compared to standard stone or tile products, transportation cost, fuel and space are saved in normal shipping and handling because of **SlateFlex's** extreme light weight.
